EDUCATION

University of Central Florida

Orlando, FL

Bachelor of Science in Computer Science, Minor in Intelligent Robotic Systems

Aug. 2024 – Present

- Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Security in Computing, Systems Software, Discrete Structures.

EXPERIENCE

Software Engineer Internship

Aug. 2024 – Present

Foundations IT, Inc.

Tampa, FL

- Developed and maintained cross-platform mobile applications using React Native and Expo, targeting both iOS and Android.
- Authored a background GPS anchor-drift alarm for marine craft that persists through app termination and provides lock-screen indication; shipped to the App Store.
- Designed an offline-first sync layer with idempotent replay and exponential backoff, keeping user data intact through extended connectivity loss without duplication.
- Built the team's CI/CD from scratch in Azure Pipelines with Fastlane: automated iOS/Android/web builds, code signing, and TestFlight/Play Store deployments.
- Introduced AI-assisted development at the team by building a shared `.claude` skill library encoding the project's REST API patterns and conventions, adopted by the mobile team to accelerate feature work.

Technical Lead – University Rover Challenge

Aug. 2024 – Present

Project S.T.O.R.M., UCF

Orlando, FL

- Technical lead for a student-built Mars-analog competition rover, coordinating five subteams (arm, drive, electrical, software, science) across mechanical, electrical, and software disciplines.
- Led a 4-person effort designing a custom CAN-connected stepper motor controller PCB for the robotic arm, personally authoring the STM32G474 microcontroller schematic around TMC5160 stepper drivers with external MOSFET H-bridges.
- Set technical direction and coordinated integration across subteams, aligning hardware and software efforts toward competition requirements.

Front-of-House Staff

Nov. 2021 – 2024

Villagio's

Tampa, FL

- Worked front-of-house across three roles, coordinated food delivery, table turnover, and guest seating in a high-volume restaurant.
- Trained new hires across all three front-of-house roles: busser, food runner, and host.

PROJECTS

Rover Autonomy & Simulation Stack

Aug. 2024 – Present

ROS2 Humble, Gazebo Fortress, LiDAR, Depth Camera, GNSS

- Built a physics-based simulation of a competition rover in ROS2 Humble and Gazebo Fortress as a development platform for an autonomous navigation stack.
- Integrated and configured simulated LiDAR, depth camera, and GNSS sensors, publishing sensor data over ROS2 topics for downstream perception and localization.
- Implemented full teleoperation using the ROS2 `diff_drive_controller`, with safety features including a deadman's switch and automatic shutdown on loss or degradation of the joystick connection.

TECHNICAL SKILLS

Languages: Python, C++, C, JavaScript, TypeScript, Java, HTML/CSS

Tools: Linux, Docker, WSL2, Git, Azure DevOps, Fusion 360, CLion, PyCharm, IntelliJ, VS Code

Frameworks/Libraries: ROS 2 Humble, React, Expo, Node.js, REST APIs, OpenCV
